

Mayur M Manjrekar

6360659809 | mayurmanjrekar1999@gmail.com |  LinkedIn |  GitHub

Profile Summary

DevOps Engineer with over 4 years of experience in designing, implementing and optimizing cloud infrastructure and CI/CD pipelines. Proven track record in driving innovative solutions, automating complex workflows, and enhancing operational efficiency across environments. Strong cloud expertise with a passion for automation and continuous improvement.

Technical Skills

- **Cloud Technologies:** Google Cloud Platform (GCP), Google Kubernetes Engine (GKE), Cloud Run Functions, Cloud SQL, Compute Engine, Networking (VPC), Load Balancing, IAM
- **IaC & Scripting:** Terraform, Ansible, Packer, Shell Scripting (Bash), Python, YAML, Linux
- **CI/CD & DevOps Tools:** Azure DevOps, GitHub Actions, Jenkins, SonarQube, Git
- **Containerization & Orchestration:** Kubernetes Engine, Docker, Helm, Istio (Service Mesh), Kubernetes Manifests
- **Observability & Reliability:** Cloud Monitoring, Logging, Troubleshooting, Performance Tuning

Professional Experience

Cloud DevOps Engineer at Globant

December 2024 - Present

Leading the modernization of legacy finance application portfolio by migrating workloads from on-premises and Azure infrastructure to GCP.

- Standardized deployment framework for containerized applications on GKE, leveraging Helm for template-driven configuration and Azure DevOps for robust CI/CD pipelines that ensure scalable and reliable releases.
- Modernized legacy applications using Cloud Run and IAP for zero-trust authentication; streamlined batch jobs via Cloud Functions, reducing operational overhead.
- Implemented a DevSecOps workflow by integrating SonarQube into the CI/CD pipeline, automating static code analysis for pull requests and enforcing quality gates to maintain high code standards.
- Optimized containerization by standardizing pre-hardened base images and decoupling the application build process from image creation. Resulting in reduced build time by 75% with smaller image size and enhanced security.
- Reduced operational and infrastructure costs by 16% through resource consumption analysis and workload right-sizing, ensuring optimal performance and scalability.
- Enhanced observability and reliability by configuring alerts and notifications to appropriate channels for workloads and database services, reducing downtime risks.

Cloud DevOps Engineer at Cognizant

February 2022 - December 2024

Worked on a large-scale cloud migration project for on-premises applications to Google Cloud Platform (GCP).

- Architected zero-downtime deployment strategies to ensure uninterrupted application availability.
- Designed and automated scalable cloud provisioning and deployment solutions using Terraform, streamlining infrastructure management.
- Leveraged Google Kubernetes Engine (GKE) to deploy containerized applications, creating Dockerfile and Kubernetes manifests for efficient, scalable, and reliable deployments.
- Streamlined Compute image creation using Packer and shell scripts to prune older images within a CI pipeline, significantly reducing manual intervention.
- Automated the deployment process through the development of robust CI/CD pipelines using Azure DevOps.
- Demonstrated strong problem-solving skills by effectively troubleshooting issues to resolve application deployment and runtime challenges.

Education

Gogte Institute of Technology, Belagavi
Bachelor of Engineering

August 2017 - September 2021
CGPA: **8.4**

Certifications

- Google Cloud Certified: Professional DevOps Engineer
- Google Cloud Certified: Associate Cloud Engineer
- GitHub Foundations
- GitHub Actions

Projects

3-Tier-GKE-Spanner: GCP Microservices with GitOps and Service Mesh

[🔗]

Tools: [GitHub, GitHub Actions, Google Kubernetes Engine, Spanner, Terraform, Istio Service Mesh, Prometheus, Grafana]

- Designed and deployed a highly scalable microservice application leveraging GCP services and GitOps methodology.
- Deployed application on a secure, private GKE cluster backed by a scalable Cloud Spanner database.
- Managed microservices on GKE using Helm and orchestrated Istio for traffic management and security.
- Integrated Prometheus and Grafana for comprehensive application and infrastructure monitoring.

Achievements

- **Sapphire Award:** Budding Star in the project. Recognized for exceptional dedication and expertise in GCP and Azure DevOps, consistently delivering high-quality solutions and meeting tight deadlines.
- **Published Article:** Authored **Infrastructure Automation: The GitOps Way** in Globant's Medium publication, sharing insights on modern DevOps practices and automation strategies.
